	Identify how to report rental expenses.	Rental Loss

Key Terms

Actual Expense Method: One of two methods for calculating business automobile expenses. For the actual expense method, the taxpayer determines the business portion of expenses for fuel, auto maintenance, parking fees and tolls, and auto loan interest. (The other method is the standard mileage method.) The actual expense method is out of scope for the VITA/TCE programs.

ADS: Alternative Depreciation System.

At-risk Rule: One of two restrictions on how much a loss from passive activity can offset other sources of income. Taxpayers are restricted from claiming a loss for more than they could actually lose from the activity; they can claim a loss only up to the amount for which they are personally at-risk in the activity. (The other restriction is the passive activity rule.)

Basis: The basis in a home is determined by how the taxpayer obtained the home. If a taxpayer bought or built a home, the basis is what it cost the taxpayer to buy or build that home. If the taxpayer inherited the home, generally the basis is its fair market value on the date of the decedent's death, or on the later alternate valuation date chosen by the representative for the estate.

Cash Method of Accounting: Accounting method that reports income when constructively received (not earned) and expenses when paid (not incurred), as opposed to the accrual method.

Depreciation: An annual deduction that allows taxpayers to recover the cost of property used in a trade or business or held for the production of income. The amount of depreciation depends on the basis of the property, its recovery period, and the depreciation method.

Investment Income: Investment Income includes taxable interest and dividends, tax-exempt interest, capital gain net income, net income from rents and royalties not derived from a trade or business, and net income from passive activities.

Modified Accelerated Cost Recovery System (MACRS): Depreciation method for property placed in service after 1986. MACRS calculates a taxpayer's depreciation deduction by using the property's placed-in-service date, recovery period, and depreciable basis.

Passive Activity: When a taxpayer receives income mainly from the use of property rather than for services. Passive activity means the taxpayer is not involved in making significant rental or business management decisions (versus active participation). Because rental activities are generally considered passive activities, rental losses may not be fully deductible.

Rental Expenses: Ordinary and necessary expenses attributable to the production of rental income and maintenance of the rental property, such as advertising, cleaning and repairs, insurance premiums, and property management fees.

Rental Income: Payments received by a taxpayer from tenants who rent the taxpayer's property, including regular and advanced rent, payments for breaking a lease, expenses paid by the tenant, and the fair market value of property or services received in lieu of monetary rental payments.

Schedule K-1 (Form 1041): Used by the fiduciary of a domestic decedent's estate, trust, or bankruptcy estate to report income, gains, losses, etc., of the estate or trust.

Schedule K-1 (Form 1065): Used by partnerships to report the taxpayers' share of the partnership's income, deductions, credits, etc.

Schedule K-1 (Form 1120S): Used by S corporations to report the taxpayers' share of the corporation's income (reduced by any tax the corporation paid on the income), as well as any deductions, credits, etc.

Standard Mileage Method: One of two methods for calculating business automobile expenses. For the standard mileage method, the taxpayer multiplies the business miles by the mileage rate for that tax year. (The other method is the actual expense method.)
